5G research project to improve medical care in rural areas

Use of a drone with a defibrillator at short and medium distances for cardiovascular emergencies outside a hospital.

Support of nursing staff with the help of VR/AR/MR in the field of wound management as well as training and further education.

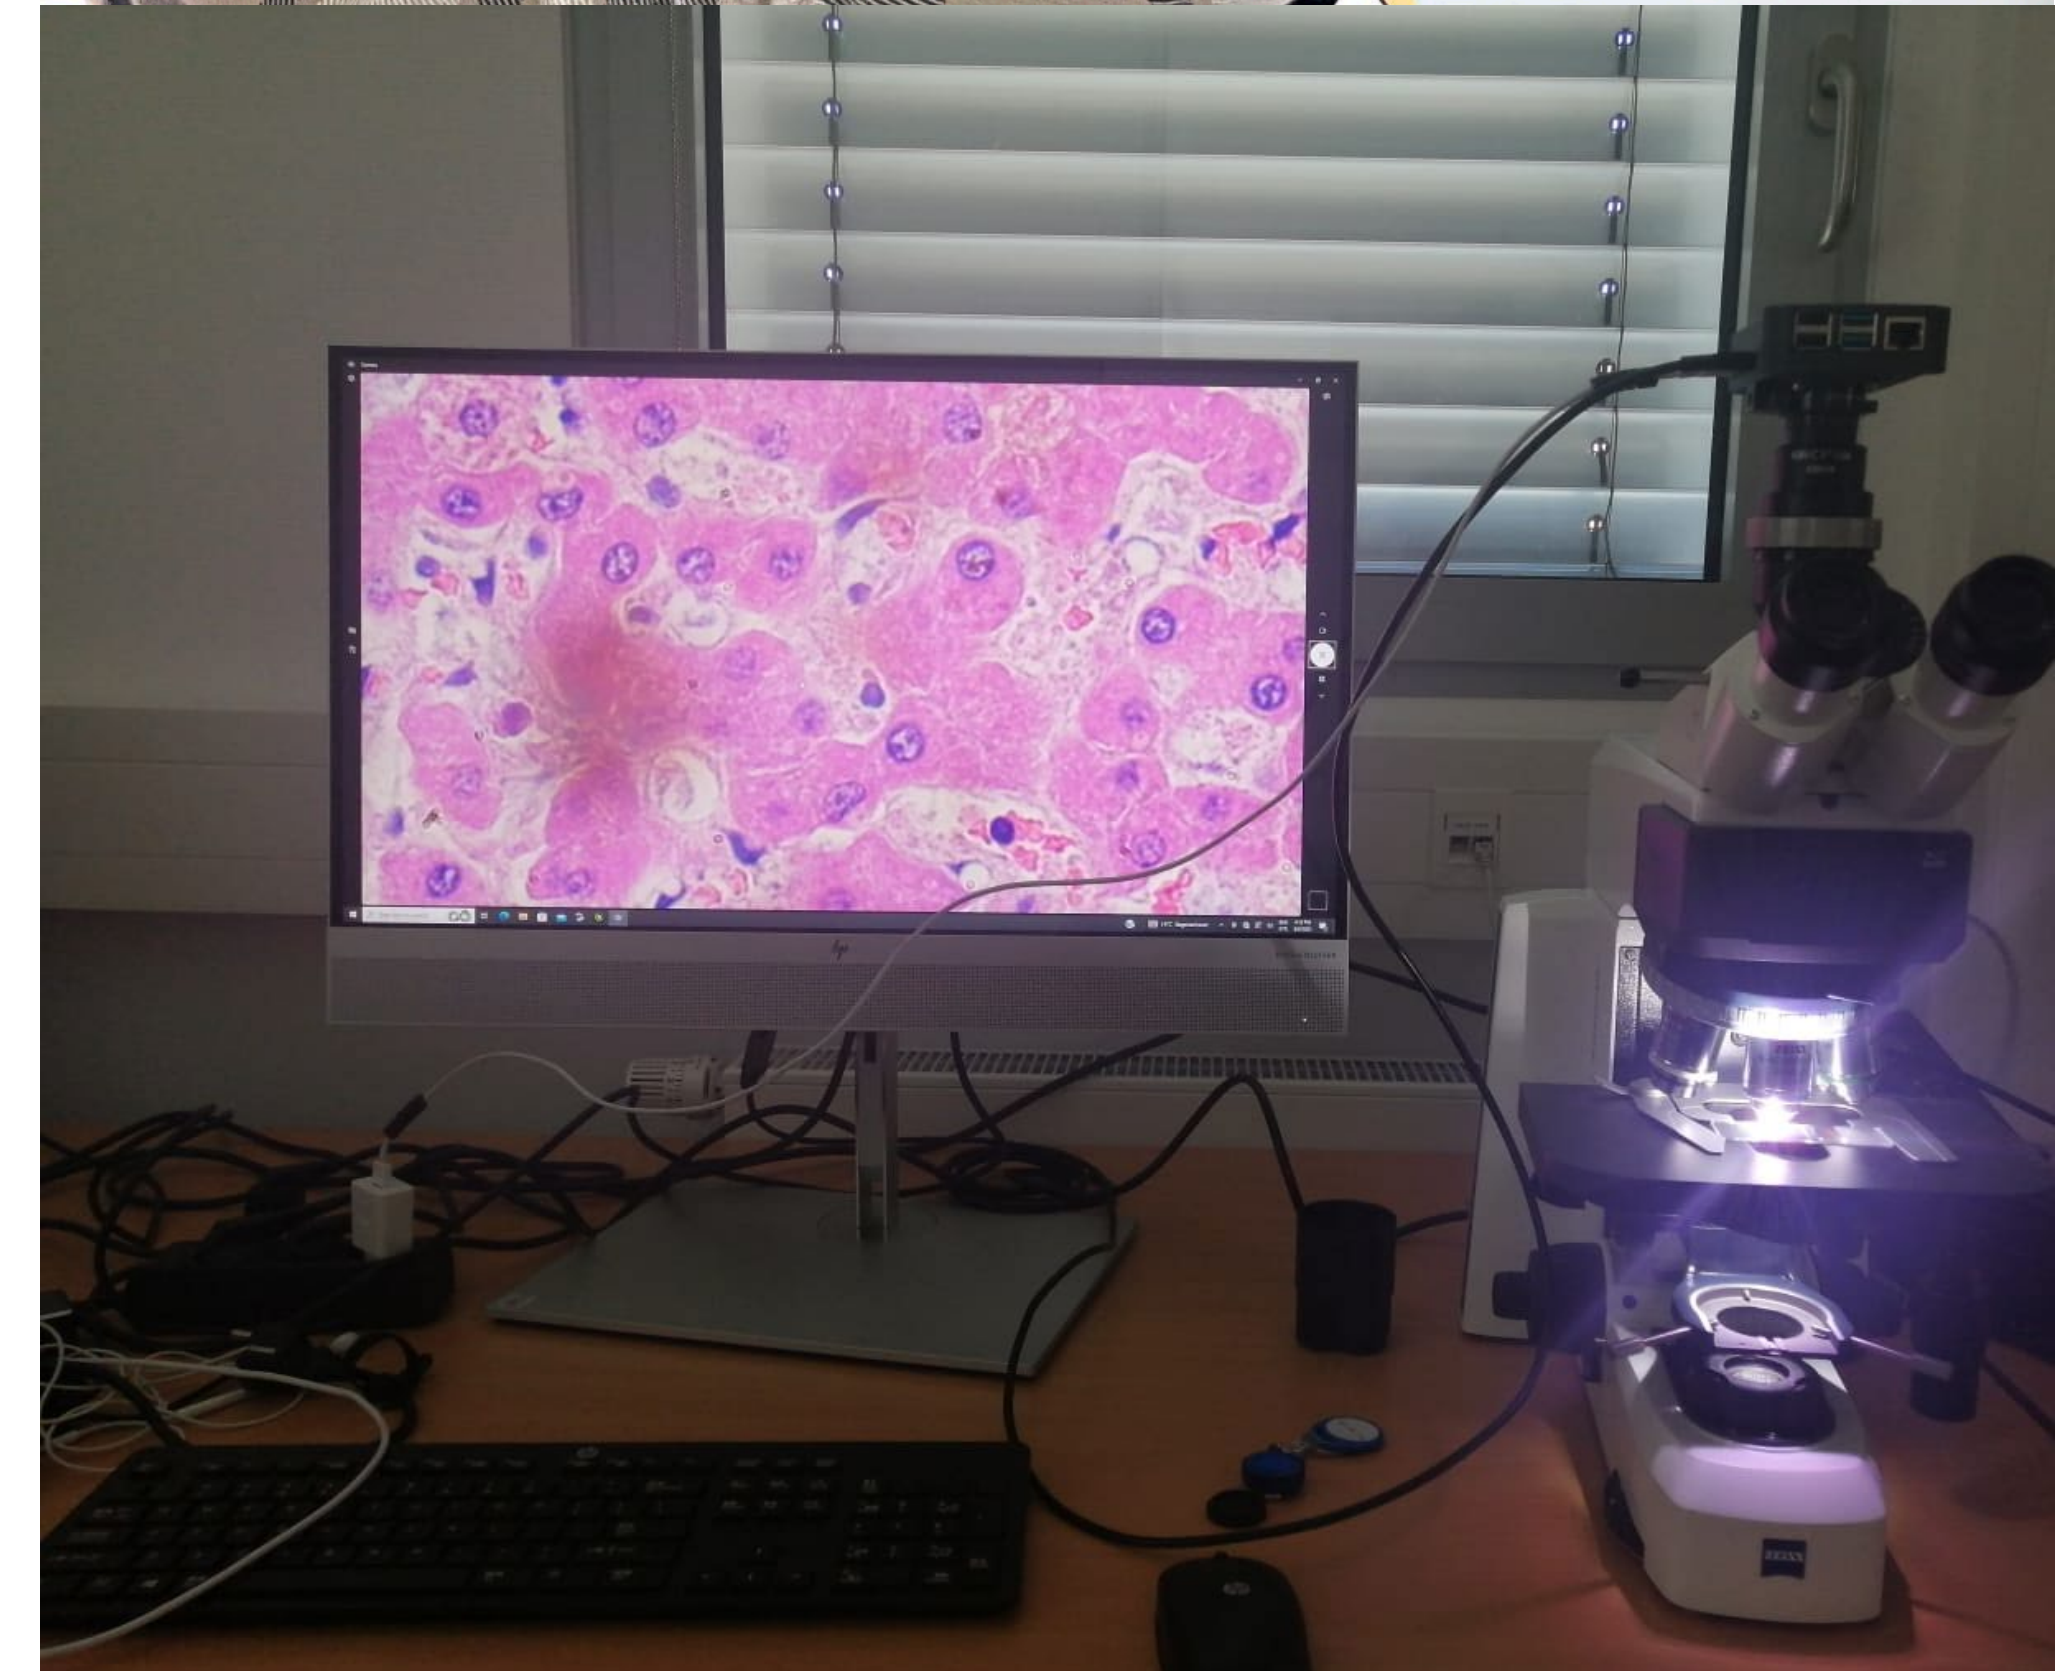

Transmission of histopathological whole-slide images (WSI) and 3D representation using XR technology.

Connection of ambulances and clinics during rescue missions.

Localization of equipment and objects in clinics.

What we do in 2024
